

The worldwide **Conveyors** of automated garment sorting, storage & retrieval.

U-Pick-ItSM Automated Uniform Delivery System

The worldwide leader in
automated uniform delivery systems for
hotels & casinos
and
medical centers.

White Conveyors U-Pick-ItSM is the leader in automated uniform delivery systems.

The leader in conveyor systems for industrial laundry and dry-cleaning, White Conveyors is also the leader and innovator in cost-effective, automated, garment handling, storage and delivery systems for hotels, casinos, hospitals and medical centers.

Before you read specific information regarding applications in your industry, read in general terms why the White Conveyors U-Pick-It System is so efficient, productive and economical.

The Process

The U-Pick-It System simplifies uniform and locker bag handling. It is efficient and simple to operate. When employees come to work, they swipe their personal ID card at their pre-assigned retrieval door area. If the employee misplaces their card, they can enter their ID number on the keypad. The System recognizes the employee and rapidly rotates the conveyor, always using the shortest route, to deliver their pre-assigned garment slot to the access door in less than 15 seconds. The magnetically locked Lexan door will unlock, allowing the employee access to his or her uniform or locker bag. Only items on the pre-assigned garment slot will be accessible while the door is open (see photo inset on opposite page).

When the employee has retrieved his or her property, they close the door and it locks automatically. As the next employee swipes his or her card, the System repeats the process.

For locker bag systems, the employee puts his or her personal belongings in the locker bag after changing and returns the bag to the System. At the end of the shift, another swipe of the ID card brings the employee's personal property back to the retrieval door. The employee changes into street clothes and returns the bag to the System. Soiled uniforms can be dropped into a return chute with or without a RF chip reader. At no time is a traditional counter attendant required.

The System requires just one attendant to load clean uniforms. The attendant switches the System to Load Mode, deactivating the pick-up area. The attendant then scans the bar coded (RF chipped) clean uniforms;

the conveyor automatically advances to that employee's dedicated slot location; and the attendant loads the clean uniform. The process is repeated until all clean uniforms have been loaded. Then the System is switched back into Pick-Up mode.

The U-Pick-It System is engineered to meet your needs. It is completely modular, flexible and can be designed to fit your building, your volume and your budget. Visit our website or call today for a free video.

Hotel & casino applications

The U-Pick-It System simplifies uniform/locker bag handling and does it efficiently. U-Pick-It gives you the benefits you have been looking for whether your property is large or small. In the hotel, resort, casino industry alone, installed White Conveyors Systems are presently serving over 200,000 employees.

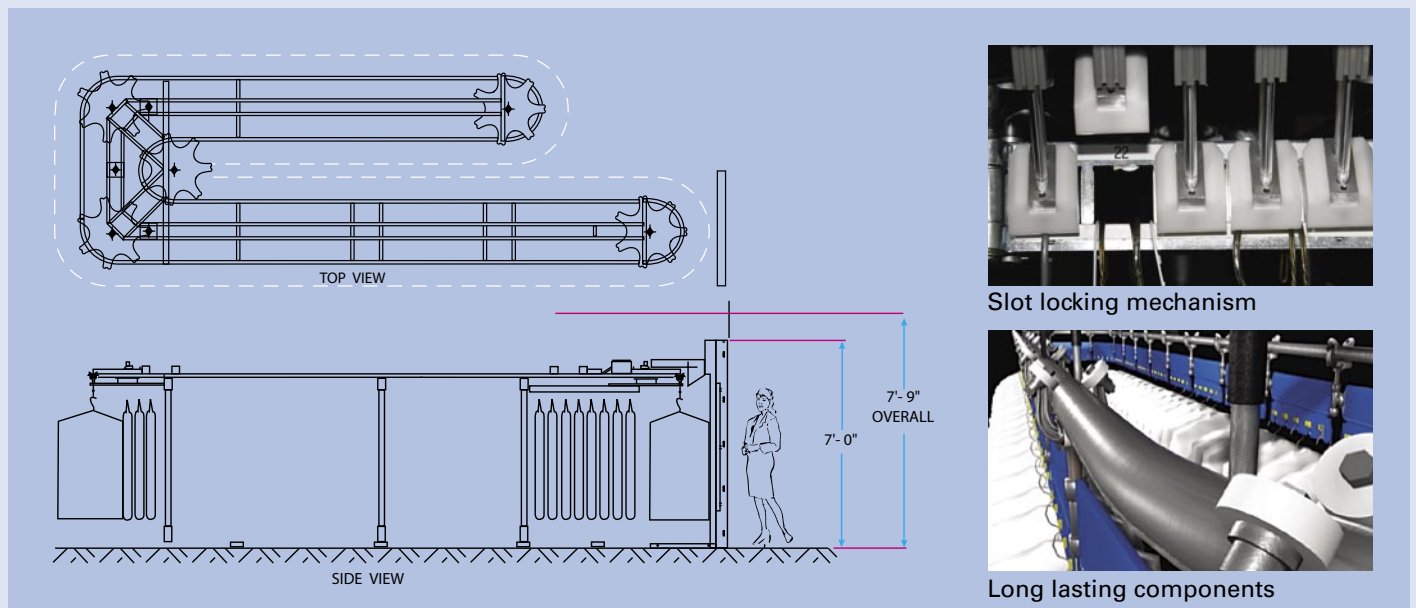

U-Pick-It Systems eliminate the need for a multi-shift uniform room attendants. It also eliminates employee wait time for uniform pickup and gives accurate tracking of garment inventories. There is optional third party uniform tracking software available that allows for one scan loading that can be performed with either bar coded or RF chipped garments.

For employees, the U-Pick-It System provides a secure environment for their personal belongings. They can rest assured that their possessions are stored safe and secure. For management, the U-Pick-It establishes an efficient tracking system for expensive garment and uniform inventories and can cut losses due to employee theft or misplaced garments.

U-Pick-It has an operating lifetime that can exceed 20 plus years with minimal maintenance. Typical return on investment can be realized in less than 2 years.

White Conveyors can custom design a U-Pick-It to fit your needs

Hospital applications

The U-Pick-It System simplifies uniform/medical wear and locker bag handling. U-Pick-It gives you the benefits in garment handling and storage you have been looking for whether your medical facility is large or small.

Garments can be equipped with RF chips for proper tracking of the inventory throughout the laundering and employee distribution operations.

The System can be set up to be size specific as opposed to personalized for individual employees. This is a cost saver by not having to stock a larger inventory of garments.

Controlled uniform inventory distribution lowers losses due to employee misplacement or theft. Third party uniform management software is available if desired.

Controlled hospital garment inventories are required in some countries and could be mandated in others in the near future. White Conveyors, working with partners or current hospital laundry firms, can provide turnkey systems that prevent garments from leaving the hospital. This avoids the possibility of bio-contaminated garments being exposed to the public.

If desired, a locker bag system can eliminate large employee locker rooms, providing a secure environment for personal belongings while freeing valuable space for vital hospital needs.

White Conveyors mission:

**Global
Responsive
Innovative
Specialized
Committed**

U-Pick-It benefits summarized.

Increased productivity

Multiple pick-up locations without increasing personnel. System activated by ID card, no attendant needed.

Maximum space utilization

Allows full use of available space. Can be located at ceiling, room above or below, frees up floor space.

Uses existing facilities

Modular design - change elevation, go around obstacles, configure to fit any building.

Fast return on investment

Payback typically in two years or less.

Eliminates costly space & less secure locker rooms

Allows for smaller changing rooms & secure property storage.

Existing conveyors can be upgraded

In many cases, existing White Conveyors storage conveyors can be upgraded to a U-Pick-It System.

Flexible uniform identification

Uses any identifier: barcode, RFID chip, or man-readable labels.

Improved garment quality & employee morale

Employees look better, uniforms issued faster, no waiting.

Data merging capability

Integrates uniform inventory with existing MIS system or any standard inventory management program. Turnkey hardware plus software solutions are available.

Custom designed solutions

Engineers analyze your needs and provide best solution for your facility.

Low maintenance

Features heavy-duty, long lasting, components. Innovative features such as "smart start" motors limit wear and tear on conveyor components.

Excellent customer service

White Conveyors is responsive and committed to world-class customer service.

White Conveyors is an ISO9001 registered company.

White Conveyors U-Pick-It Systems are CE, UL, and ETL certified.
